**For Immediate Release**  
**February 8, 2010**

Rome, NY: PAR Government Systems Corporation applauds Congressman Arcuri for his leadership role in organizing federal cyber security research.

Congressman Arcuri led the effort on the House floor to pass important and timely legislation, the Cybersecurity Enhancement Act, HR 4061. The bill contains funding for new cyber security programs and establishes national university-industry task forces to find solutions and promote workforce development to protect critical infrastructures throughout the country.

PAR Government's Rome, NY work force, which employs over 200 is involved in cyber security related work. Stephen Lynch, PAR Government's President said, "Cyber security research and development, training and education are critical to this nation's future. These legislative efforts are truly necessary."

Cyber security now affects every aspect of our human evolution and quality of life. As we all continue to rely on the Internet, our rapid transition into a digital society has quickly become a necessity not a luxury. This dependence spans the globe in commerce, energy, medicine, transportation, education, the environment, and of course communication. Emerging state-of-the-art technologies and training will offer the greatest hope as every sector of our economy must maintain the integrity of their transactions including the military, government, private business, utilities, financial and academic institutions.
